Remadder Portable is a utility that can help you save storage space by eliminating redundant data that you might be keeping without even realizing. Acidic pH inhibition of aryl hydrocarbon hydroxylase in rat adrenal. Effect of bilateral nephrectomy. The effects of acidosis on rat adrenal androgen synthesis were studied in vitro using intact and excised adrenals. Adrenal 11-beta-hydroxylase (11-beta-OHase) activity was inhibited by acidic pH; this inhibition was not present in adrenal obtained from nephrectomized rats. In the intact adrenal 11-beta-OHase activity was not affected by acidification. In the adrenal cortex the acidification of medium caused a decrease in specific androstenedione formation; this reduction was not observed in 11-beta-OHase-depleted adrenals. Acidosis inhibited 13-cis-retinoic acid (13-cis-RA) but not 6-methyl-1,2,3,4-tetrahydro-5H-carbazole-9-carbonitrile-induced androstenedione formation. Acidic pH resulted in a decrease of in vitro [3H]retinoic acid binding in the intact adrenal and in the excised ones. It is concluded that inhibition of steroidogenesis by acidosis is due, at least in part, to a reduction of 13-cis-RA binding and that the 17-18-oxidizing system is involved in the response to acidic pH. Q: flask, flask-admin and Pagination I'm new to flask and i'm building a blog with Flask and flask-admin, i've noticed that if you make many entries and you go to the admin page, the pagination page freezes up and the first page loads and all others are blank. I used to use django template forms and the data from the form was passed to a view which was processed, all this was stored in a database, is there an easier way to achieve pagination? I'm quite at a loss here, any help is appreciated.

A: Flask's default pagination does not work with forms. If your model is paginated via PaginationMixin, then you will get a broken pagination. You can use ObjectPagination, which is better than Flask-Bootstrap's Pagination because it's customizable. See [here](#) for an example.

Q: Connection strings and Entities and Models I am confused about connection strings and their usage. I am using Entity Framework and have created my context dbContext. My project has 2 different database. dbContext(dbContext.GetType().Name + " " + Properties.Settings.Default.ConnectionStringName) To connect to the server database defaultConnection.ConnectionString = Properties.Settings.Default.ConnectionStringName; And to connect to a third database for logging tables etc LogDatabase.Connection.ConnectionString = Properties.Settings.Default.ConnectionStringName; What is the point of this when I can just create 1 context and use it for both? Wouldn't it make more sense to use 1 context for all my models and just provide the right model name to the context depending on if you want to connect to the server or the Log database?

A: By default, Entity Framework Context will use the first connection string that is set at execution time. Therefore, you will need to use the following:

```
public void someMethod() {  
    using (var dbContext = new MyDbContext(Properties.Settings.Default.ConnectionStringName)) { }
```

Additional information:

- Trigram similarity: Identify records based on their text representation (3-word phrases or longer) by their neighbors
- Levenshtein distance: Identify records with a small number of bytes that were altered in their text representation.

Review: Remadder Portable is a data comparison tool that allows you to detect duplicate records and delete them. It allows for a fast, accurate comparison of data sets that are considerably large and uses a variety of algorithms that include Levenshtein distance and trigram similarity to determine if the records are different. When identifying duplicate records, this software uses postgresSQL as its backend, with a quick installation. You can select the fields to be compared and their order, making it easy to work with. It is recommended that you configure the search in small batches to avoid bottlenecks, as you wouldn't want the service to work slowly on a large database. When it comes to the cost of removing duplicates, it's best if you used an expert to help you. With Remadder Portable, you can compare two data sets, remove duplicates, make a backup of the original, reduce the storage space by a considerable amount and obtain exactly what you need to save resources. It's one of the best solutions for saving storage and costs. Waste material processing and recycling is a crucial issue. Eliminating the waste materials in its
