Several government agencies and private companies in the USA have contracted with PHILI to review and create the standards used by the companies developing new drugs. PHILI has worked on many such projects. All of our literature is available for free by request. Projects and publications Examples of projects and publications that have used PHILI's expertise include: Food and Drug Administration (FDA) - Implemented the Domain Based Safety Risk Management (DB-SRM) concept in various contexts, including work on harm analysis for medical devices, and to support the development of FDA guidance on risk characterization Commissions of Inquiry for the Prevention of Foodborne Disease (US) - Reviewed new methods to identify outbreak sources. The current version of their methods were written by PHILI. Avian flu - Created guidelines for the evaluation of manufacturing processes Exposures and Dose, Effects of Food Additives (EU) - Drafted the re-evaluation of a large group of food additives that have been identified as mutagenic or carcinogenic in rodents. AMSA - Developed the Coordination of Clinical Trials in Antibacterial Resistant Biofilms. Commission on Globalization - Reviewed and published a report on alternative approaches to risk assessment Another CIG report PHILI has also submitted reports to the World Health Organization on request, including in the context of the Codex Alimentarius documents and two other Codex Committees on food allergenicity, nutrition and food standards. This analysis is done by outside experts who are invited by the Committees based on their work and expertise. Selected work In the following table, companies and products mentioned were visited when writing the reports, but not necessarily specifically cited. The numbers are the page numbers

discusi3n general acerca de Fundamentos de Inform3tica. The Sareftefteld eagle. Image: Public Domain Scientists have established a new species of small eagles on the Asian steppes.

Its discovery is "like an archaeological find," says one of the researchers. The birds in the new species are pretty unusual.

They have long legs and wings, but are small, weighing in around five kilograms. They also have unusually shaped heads.

They have stouter skulls than all living eagles except for vultures, which makes them surprisingly agile. The new species, which scientists call the Sareftefteld eagle, was found by Jonathan Kingdon in the Sareftevlet steppes. The area is sparsely populated and thus not very well studied, but Kingdon and his colleagues have been able to make fairly confident identifications of the birds based on their skulls. Vultures prefer to preen themselves, but these eagles prefer to gulp down their insect prey. They flap into a branch with a sweep of their long legs and a jump from their wedge-shaped, encephalised heads.

They also use the sideways strike common to vultures, but the punches they deliver are far more powerful. A shallow blow from an eagle can knock an insect out of
